

What is SB 272?

Senate Bill 272 - California Public Records Act

Approved by the California Governor on October 11, 2015, Senate Bill 272 adds a section to the California Public Records Act requiring state and most local government agencies to create a catalog of Enterprise Systems by July 1, 2016, with annual updates.

Enterprise System

An Enterprise System, as defined by Senate Bill 272, is a software application or computer system that collects, stores, exchanges, and analyzes information an agency uses that is both of the following:

- A multi-departmental system or a system that contains information collected about the public
- A system that serves as a 'system of record' or an original source of data within an agency

Requirements

1. Create a catalog of enterprise systems containing:
 - o Current system vendor
 - o Current system product
 - o System's purpose
 - o Description of categories or types of data
 - o Department that is the prime custodian of the data
 - o Frequency that system data is collected
 - o Frequency that system data is updated
2. To make the catalog publicly available upon request
3. To post the catalog in a prominent location on the agency's website

Exclusions

- Enterprise systems do not include cybersecurity systems, infrastructure and mechanical control systems, or information that would reveal vulnerabilities to, or otherwise increase the potential for attack on, a public agency's IT system.
